TERMS OF REFERENCE FOR THE PROCUREMENT OF CLOUD HOSTING SUBSCRIPTION FOR THE PHILIPPINE GOVERNMENT ELECTRONIC PROCUREMENT SYSTEM (PhilGEPS)

I. BACKGROUND

The Procurement Service-Department of Budget and Management (PS-DBM) was created on October 18, 1978 by virtue of Letter of Instructions (LOI) No. 755 which directed the establishment of an integrated procurement system for the national government and its instrumentalities. The PS-DBM is mandated by law to operate a government-wide procurement system for common-use supplies and equipment for all government agencies.

The Philippine Government Electronic Procurement System (PhilGEPS) is the single, central portal for all government procurement operated and controlled by the PS-DBM. The system has been operating since March 2018. During the span of this time, there had been different developments of the system to add new functionalities.

Currently, the PhilGEPS has 2 primary system applications named PhilGEPS 1.5 and Modernized PhilGEPS 2.0 (mPhilGEPS) which is currently hosted in a single cloud computing platform.

Cloud computing platform is highly scalable and flexible in terms of allocating computing power resources, monitoring, and it is dependable because of its 'High Availability' structure which enables the system to run in a longer period of time with minimal risk of failure.

Aside from the PhilGEPS, the cloud computing platform also hosts the databases, cloud computing security platform, and test site application.

II. OBJECTIVE

The main objective is to ensure operations continuity for the PhilGEPS under a cloud hosting subscription to minimize service interruption and ascertain continued utilization by the procurement entities and merchants as mandated by R.A. 9184.

III. SCOPE OF WORK

The Cloud Service Provider (CSP) is responsible for providing cloud hosting subscription with the following specifications to ensure compatibility with PhilGEPS and to ensure a round-the-clock service. The CSP shall provide an equivalent specification to the requirements below:

Note: The above mentioned cloud computing resources can change depending on the demand from the end-user. Changes shall be agreed between the CSP and the end user, and ensure the allocated resources are 90-100% utilized. It also requires signed documentation of any changes made in the cloud computing resources.

The CSP is required to input the proposed price on every line item in the technical requirement (see Annex “B”)

All prices submitted by the CSP should be greater than or equal to the minimum retail price offered by the Cloud Computing Service published in the public pricing calculator except for the 10 months support.

For the prices offered by CSP that are lower than the published retail price, the CSP shall submit a certificate or any equivalent document granting the discount or special price.

The CSP shall be responsible for the following:

- *Manage the end-to-end implementation (Back-up, Migration, Configuration, Deployment etc);*
- *Provide 10 months support services;*
- *Deliver services within seven (7) calendar days from receipt date indicated in the Notice to Proceed (NTP);*
- *The prospective service provider must be an authorized distributor of the cloud computing platform, as attested through a signed manufacturer's certification. In case of being a reseller, partner or dealer, a signed local distributor's certification is needed. This shall be submitted to the Chairperson of the PS-DBM Bids and Awards Committee;*
- *The prospective service provider shall provide PS-DBM access to its help desk ticketing system for incident management and to enable the authorized PS-DBM personnel to quickly pull out relevant information;*
- *The prospective service provider shall conduct cloud services consumption planning to ensure efficient usage of monetary resources and to ensure that the cloud subscription shall have sufficient flexibility in case it is not fully utilized; and*
- *The prospective service provider must have three (3) Cloud Platform Certified Architect or Engineer in its personnel roster.*

IV. SERVICE LEVEL AGREEMENT

Service Commitment

The Cloud Service Provider shall ensure that the cloud platform is available with a monthly uptime percentage of at least 99.95% during any monthly billing cycle as a “Service Commitment”. In the event that the cloud environment does not meet the Service Commitment, the agency will be eligible to receive a Service Credit.

A “Service Credit” is a dollar credit that the CSP may credit back to an eligible account.

Definitions

1. Monthly Uptime Percentage

Calculated by subtracting the percentage time during the month in which the cloud platform is “unavailable” from 100%. This includes downtime resulting directly or indirectly, but not limited, to the following instances:

- a) When the PS-DBM runs instances on the cloud environment and has no external connectivity.
- b) When all of the client’s attached volumes on the cloud environment perform zero read/write and input/output or have pending input/output in the queue.

2. Service Commitments and Service Credits

Service Credits are calculated as percentage based on the cloud platform performance for the month’s billing cycle in which there were instances of being unavailable respective to the circumstances below:

Monthly Uptime Percentage	Service Credit Percentage
Less than 99.95% but equal to or greater than 99.0%	10%
Less than 99.0%	30%

CSP will apply service credits only against future cloud platform payments due to PS-DBM. Service credits will not entitle PS-DBM to any refund or other payment from CSP. A Service Credit will be applicable and issued only if the credit amount for the applicable month’s billing cycle is greater than one dollar (\$1 USD). Service Credits may not be transferred or applied to any other account unless otherwise provided in the Customer Agreement.

The sole and exclusive remedy for any unavailability, non-performance, or other failure by CSP to provide the cloud hosting subscription or service is the receipt of a service credit (if eligible) in accordance with the terms of this service-level agreement (SLA).

Credit Request and Payment Procedures

To receive a service credit, PS-DBM must submit a claim to the CSP. To be eligible, the credit request must be received by CSP by the end of the second billing cycle and must include the following details:

- the words “SLA Credit Request” in the subject line;
- the dates and times of each unavailability incident that PS-DBM is claiming;
- the affected CSP instance IDs or the affected CSP volume IDs; and
- PS-DBM request logs that document the errors and corroborate PS-DBM’s claimed outage (any confidential or sensitive information in these logs should be removed or replaced with asterisks).
- If the monthly uptime percentage of the request is confirmed by CSP and is

less than the service commitment, CSP shall issue the service credit to PS-DBM within one billing cycle following the month in which the request was confirmed by CSP. Failure to provide the request with other information as required above will disqualify PS-DBM from receiving a Service Credit.

SLA Exclusions

The service commitment does not apply to any suspension or termination caused by the enumerated circumstances: (i) that result from a suspension of the Customer Agreement; (ii) caused by factors outside of reasonable control, including any force majeure event including issues with PS-DBM internet access or other problems beyond the demarcation point of cloud service provider; (iii) that result from any actions or inactions of PS-DBM or any third party, including failure to acknowledge a recovery volume; (iv) that result from issues with agency equipment, software or other technology and/or third party equipment including software (other than third party equipment within CSP direct control); (v) that result from any maintenance as stated and pursuant to the Customer Agreement; or (vi) arising from PS-DBM suspension and termination of rights to use the cloud service platform in accordance with the Customer Agreement (collectively, the “Cloud Service Provider SLA Exclusions”). If availability is impacted by factors other than those used in our Monthly Uptime Percentage calculation, then CSP may issue a Service Credit considering such factors at CSP discretion.

V. APPROVED BUDGET FOR THE CONTRACT

The cloud hosting subscription will cost **PHP 17,170,732.90** inclusive of all taxes, such as, but not limited to, value-added tax, local taxes, and other fiscal levies or government charges.

VI. PROJECT DURATION

The duration of the cloud computing platform subscription is ten (10) months or until the contract amount budget is fully consumed.

VII. PROJECT TIMELINE

The duration of activities is estimated to be around seven (7) calendar days.

Item	Description	Activities
1	Transfer of Account to new CSP (if applicable)	<ul style="list-style-type: none"> • Transfer of ownership from the current CSP to the new CSP using the same cloud computing platform

VIII. PAYMENT SCHEDULE

The cloud service provider shall be paid monthly based on the actual usage or consumption and upon the issuance of a Certificate of Acceptance by the procuring entity, subject to deduction of applicable taxes.

ESSENTIAL CHARACTERISTICS OF CLOUD COMPUTING PLATFORM

On-demand Self-service. Unilaterally provision computing capabilities, such as server time and network storage, as needed automatically without requiring human interaction with CSP.

Broad Network Access. Capabilities are available over the network and accessed through standard mechanisms that promote use by heterogeneous thin or thick client platforms (e.g. mobile phones, tablets, laptops and workstations).

Resource Pooling. The provider’s computing resources are pooled to serve multiple consumers using a multi-tenant model, with different physical and virtual resources dynamically assigned and reassigned according to the agency demand. There is a sense of location independence since the government agency generally has no control or knowledge over the exact location of the provided resources but may be able to specify the location at a higher level of abstraction (e.g. country, state, or datacenter). Examples of resources include storage, processing, memory and network bandwidth.

Rapid Elasticity. Capabilities can be elastically provisioned and released, in some cases, automatically, to scale rapidly outward and inward commensurate with demand. To the end-user, the capabilities available for provisioning often appear to be unlimited and can be appropriated in any quantity at any time.

Measured Service. Cloud systems automatically control and optimize resource use by leveraging a metering capability at some level of abstraction appropriate to the type of service (e.g. storage, processing, bandwidth and active user accounts). Resource usage can be monitored, controlled and reported, providing transparency for both the provider and consumer of the utilized service.

DATA CLASSIFICATIONS

Classifying data into discrete categories enables the Philippine Government to better protect government information and enable well-informed decisions relative to access, storing, and transmission of Government data. Data classifications achieve stronger outcomes for government agencies by clarifying the safeguards required for protecting different types of data, thereby reducing uncertainty, standardizing access, and reducing costs. It also enables business and other public sector agencies to be able to use and manage appropriately classified data better.

CSP should provision 2 tiers of data for Public Sector Data Classification:

Tier 1: **Non-sensitive or Unclassified Data**, which can be stored in public cloud;

Tier 2: **Restricted or Sensitive Data**, which can be stored in public cloud with encryption requirements

Government agencies can select appropriate cloud deployment models according to their needs and also the type of handling data according to the Public Sector Data Classification. Depending on the classification of the agency’s data, with an application or mechanism that

they can apply certain controls. Agencies should be informed that these controls are addressed by the CSP.

SECURITY

The benefit of migrating government workloads and data onto GovCloud or to public cloud is the ability to enhance overall data security. The CSPs should meet international security standards and should abide by all relevant Philippine laws and industry standards.

Data that can be migrated to the public cloud will need to meet security requirements for accreditation and be verified by internationally recognized security assurance frameworks. Accepted international security assurance controls include ISO/IEC 27001 and 27018, Service Organization Controls Report (SOC) 1 and 2, and the Payment Card Industry Data Security Standard (PCI DSS). Data will be encrypted using industry-tested and accepted standards and algorithms, such as AES (128 bits and higher), TDES (minimum double-length keys), RSA (1024 bits or higher), ECC (160 bits or higher), and ElGamal (1024 bits or higher).

Below are the baseline (i.e. required) and optional (i.e. agency discretion applied) security controls that will be applied to classified government data, which CSPs must meet and be permitted to host.

Security Controls	Baseline Certification and/or Protocol Required
Security Assurance	- ISO/IEC 27001 – Information Security Management
Requirements	- Payment Card Industry (PCI) Data Security Standard (DSS) - Optional Service Organization Control (SOC) 1 and 2 - Optional ISO/IEC 27018 – Code for Practice for protection of personally identification information (PII) in public clouds acting as PII processors
Encryption Requirements	- AES (128 bits and higher) - TDES (minimum double length keys) - RSA (1024 bits of higher) - ECC (160 bits of higher) - ElGamal (1024 bits or higher)

DATA OWNERSHIP, RETRIEVAL AND INTEROPERABILITY

Data Ownership

Procurement Service-Department of Budget and Management (PS-DBM) will retain full control and ownership over their data, with CSP identity and access controls available to restrict access to customer infrastructure and data. CSPs should provide customers with a choice as to how they store, manage, and protect their data, and not require a long-term contract or exclusivity.

Ownership

Service contracts and other SLAs related to the provisioning of cloud services for government agencies shall clearly provide that any data migrated to the cloud remains the property of the government entity, regardless of who owns, manages or operates the cloud. PS-DBM will retain rights of data access, retrieval, modification, and deletion regardless of the physical location of the cloud services, including the right to approve, deny, and revoke access by third parties.

Access

Access, retrieval, modification, and deletion of data remain in the right of the PS-DBM and will be reflected in relevant service contracts. The policies and processes pertaining to data access will be defined according to the needs of the procuring entity and specified in the agreement between the PS-DBM and the cloud provider.

Interoperability

CSPs should allow customers to move data on and off their cloud platforms as needed. Interoperability of all GovCloud workloads should be based on the Philippine eGovernment Interoperability Framework (PeGIF)¹ as well as international standards, such as ISO/IEC 17203:2011 Open Virtualization Format (OVF) specification.

A cloud system's components may come from different sources including public and private cloud implementations. These components should be replaceable by new or different components from different providers and continue to work, to facilitate the exchange data between systems. CSPs are required to provide interoperability, ensuring PS-DBM may be able to change CSPs easily without a lengthy procurement and implementation cycle.
